Can geological work support the development of the Yangtze River economic belt?

Based on the demand-problem-goal oriented, the paper puts forward the idea of geological work to support the development of geological work of the Yangtze River economic belt during the 13th five-year plan.

What are the major geological problems in Yangtze River economic zone?

In some parts of Yangtze River economic zone, there are some major geological problems such as active faults, karst collapse, ground subsidence, landslide-collapse-debris flow, affecting the river-crossing channels, high-speed railway, urban agglomeration and green ecological corridor planning and construction.

Which strata are well developed in the Yangtze River economic zone?

In the Yangtze River economic zone, the strata from Archean group to Quaternary system of Cenozoic group are well developed.

Does karst collapse affect urbanization of Yangtze River agglomeration?

Urbanization of the Middle reaches of Yangtze River Agglomeration is typically challenged by karst collapse risks.

Here, we focused on the Yangtze River Delta (YRD) urban agglomeration in China and proposed an optimization framework for energy, environment, and economy.

This paper uses the two-stage NDEA-SBM model to calculate the energy, ecology, and economic (3E) efficiency of the Yangtze River Economic Belt (YREB) and analyze the spatial ...

Yangtze River Energy Storage offers a diverse portfolio of energy storage solutions that cater to both residential and commercial needs. Most notably, the organization specializes in ...

in the Yangtze River Delta based on local characteristics. The primary features, key issues, and overall integration of the system are discussed. At the same time, the economic,...

According to the study results obtained from the sediment and silt research completed for the Three Gorges project during the 9th five-year plan period, there were 11,931 large to small-sized reservoirs ...

The Yangtze River reserves approximately 1/3 of the water resources in China and is an important water source for regulation and management. At present, the Three Gorges Project is the backbone of the ...

Focusing on the Yangtze River economic zone, the previous geological researches are systematically summarized, resources and environment conditions and major geological problems ...

Located on China's longest river Yangtze, approximately 44km from the city of Yichang in Hubei province, the hydroelectric facility generated its first power in July 2003 and achieved its full ...
