How do I install a photovoltaic system?

Follow along with the essential steps of photovoltaic systems installation, from mounting solar modules and connecting to the grid, to commissioning and regular maintenance for optimal performance.

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

How do I choose the best solar panels?

Homeowners must select the right mount system type (roof or ground) for their solar panels. Roof-mounted solar panels are the most common choice for residential installations in the United States. They offer a better return on investment than ground-mount systems and save on space.

How do you activate a solar system after installation?

After solar panel installation, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, note that as long as the solar panels are receiving sunlight, they have an open circuit voltage. Be careful when handling them.

Photovoltaic (PV) systems are an increasingly popular choice for using solar energy to generate electricity. Installing them is critical to optimizing performance and ensuring a long service life. This ...
