In 2015, Honduras ranked as the second largest producer of solar electricity in Latin America (behind Chile, but ahead of Mexico). Honduras has a large potential for solar photovoltaic generation.

This report presents the work conducted by the National Renewable Energy Laboratory (NREL) on the rural electrification of Honduras, focusing particularly on schools and clinics and extending to support ...

Honduras is also one of the first non-island countries that has been able to use 10% of its solar energy for electric generation. Other forms of renewable energy include biomass at 10%, wind ...

Honduras is on a mission to transform its energy landscape with a strong focus on renewables. In a bid to achieve an impressive 80% share of renewables in its power generation by ...

With over 300 days of annual sunshine, Honduras has one of Central America's highest solar irradiation levels - averaging 5.5 kWh/m²/day. Yet less than 12% of its electricity currently comes from ...

Solar energy in Honduras was not widely developed until 2012. In 2016, the country led the Central American solar PV market with an installed capacity of 433 MW, and in 2021 solar energy ...

Hybrid solar systems are known to generate power similarly to the conventional grid-tie solar system, but it use unique hybrid inverters and batteries to store energy for later usage.

In 2022, Honduras' energy mix was dominated by oil, constituting 54.9% of the total energy supply, followed by biofuels and waste at 32.2%. Modern renewables like hydro, solar, and wind, excluding traditional biomass practices like burning wood or agricultural residues, accounted for 12.9%. In 2024, the country had 849 MW of installed capacity in hydro power. There has be...
