-----

The results revealed that solar air conditioning systems are perfectly adaptable to the Algerian climate with an important annual economy, and that solar desiccant cooling systems are more efficient under ...

To achieve this goal, solar air conditioning has been adopted, where the compressor was replaced by an ejector, a parabolic trough solar collector coupled with a thermal generator and a small pump; this ...

The main aim of this article is to provide an overview of the use of solar energy in Algeria in the cooling field, during the hottest and thus sunniest period of the year. This study focuses on innovative actions ...

The results obtained through this scientific subject are stimulating and encouraging, where this technique can be used for air conditioning in desert areas in southern Algeria, where fossil energy ...

Based on experimental results, the proposed system proved to be able to cover more than 55% of the total electricity needs for air conditioning. Therefore, this shows the potency of reducing the electricity ...

What is a solar air conditioner?A solar air conditioner is an appliance that uses solar energy for air conditioning. It is an excellent solution for hot and humid climates and can be a savior where ...

This research aims to evaluate the feasibility of operating an off-grid solar-powered air-conditioning bed unit using low-GWP refrigerants that can efficiently replace conventional refrigerants.

Meta Description: Explore how self-powered air conditioners in Oran, Algeria, leverage renewable energy for efficient cooling. Discover technical insights, case studies, and trends shaping Algeria's ...
