Our dedicated team can custom design and manufacture a portable or permanent certified Zone 1 solar powered system, with battery back-up to provide required autonomy for a multitude of applications in ...

For a solar panel to be ATEX-certified, it must meet these high standards, ensuring it does not ignite potentially explosive atmospheres during operation.

For applications in hazardous areas, (i.e. LNG, Oil & Gas installations), we offer explosion proof solar modules. Fully certified according latest ATEX and IECEx guidelines.

According to the SPM high-reliability explosion-proof solar panel technology, the explosion-proof glass plate is arranged at the top of the outer frames of the first explosion-proof...

Ex solar PV systems are solar PV systems that are rated explosion-proof and are typically installed in hazardous or potentially explosive locations such as offshore O& G platforms or petrochemical ...

Glass - glass shell and aluminium mounting frame provide high durability and stability.

Even if this technology were to become available in Gaza (and other Palestinian territories), there's an unavoidable obstacle: solar panels can't withstand bombs.

Explosion-proof solar power systems for oil, gas and chemical industries SOLAREX modules are an IECEx certified products with up to 360W power and can be used in hazardous areas of class 1
