While white PC components do sometimes go on sale, they're often more expensive than their black counterparts. For example, I just checked on Overclockers UK and Amazon and quickly ...

Just depends on what particular part you are looking at. Most people generally want black, so if they made too many white ones and they don't sell - then white is cheaper. Supply and demand.

Cost Factor: More expensive than regular green PCBs, the cost is for special manufacturing--not necessarily for inherent superiority. A well-engineered green PCB can equal or ...

Discussion on why all-white PC builds are more expensive than non-white builds, with comments explaining manufacturing costs, demand, and popularity

Black components are less efficient for cooling hence less of them are made which results in a shortage. Also it costs money for a company to go out of its way to make some black...

Yes, white parts and builds are popular, now more than ever, but it's still a smaller portion of the market than the 'standard' black, gray, and silver color scheme that goes with everything.

Also kind of biased towards white components because of how ridiculously expensive they are. Have you looked at the prices recently? For cases anyway. I like black systems better, just ...

I'm trying to build a pc right, but it's kind annoying how I have to spend more money on the same piece of equipment, but in white instead of black. Any reason to this?
