How does ADB support Armenia's Wind energy potential?

The Government of Armenia requested support from the Asian Development Bank (ADB) in exploring opportunities to develop Armenia's wind energy potential. ADB responded to the request by preparing the first of two planned phases of technical assistance (TA).

Why is wind energy important in Armenia?

Wind Energy has significant potential and is one of the fastest growing sectors for energy production. Wind power energy in the Republic of Armenia has total capacity of 450 MW with annual output of 1.26 bln kWh electricity.

Where is wind power available in Armenia?

Wind power energy in the Republic of Armenia has total capacity of 450 MW with annual output of 1.26 bln kWh electricity. High prospect areas include the mountain passes of Zod, Jajoor, Sevan, Bazoum mountains; Qarakhach and Pushkin passes, Geghama mountains, Aparan, Meghri and the highlands between Sisian and Goris.

Will a doubling of electricity capacity improve Armenia's Energy Security & Independence?

In the longer term, a doubling of this capacity appears to be economical and will improve Armenia's energy security and independence. Currently, only 35% of Armenia's total electricity demand is met by indigenous resources (primarily hydroelectric), whereas 65% of electricity generation relies on imported natural gas and nuclear fuel.

The objective of this assignment is to conduct an in-depth analysis of the legal and regulatory framework governing the energy sector in Armenia, with a specific focus on in particular the large scale wind ...

Discover the Large-scale Outdoor Communication Base Station, designed for smart cities, communication networks, and power systems. Integrated with solar, wind, and energy storage ...

In addition to coordinating the wind monitoring program, SolarEn identified and provided useful wind data from sources in Armenia, such as monthly summaries of historical wind speed data ...

The Armenian government has announced plans to construct wind power plants. It is part of a state-led initiative. By 2040, the country aims to achieve a total wind energy capacity of ...
