-----

The latest power amplifier module (PAM) developed by NEC Corporation is a compact and highly efficient solution for the sub-6GHz band, specifically designed for seamless integration into 5G ...

NEC launches a compact, high-efficiency Power Amplifier Module for 5G base station RUs, reducing power consumption and operational costs for telecom carriers.

NEC plans to incorporate this PAM into new RUs scheduled for release in the first half of fiscal year 2026 (\*2) and also envisions a global deployment of the PAM as a standalone product, ...

TOKYO - NEC Corporation today announced the development of a high-efficiency, compact Power Amplifier Module (PAM) for the sub-6GHz band, designed for integration into 5G ...

The compact module measures only 12.0mm x 8.0mm (prototype) thanks to the high-density mounting of components, which will enhance the installation efficiency of 5G-Advanced base ...

Contributing to power savings in 5G networks and reducing operational costs for telecommunication carriers  
TOKYO, Jan 28, 2026 - (JCN Newswire) - NEC Corporation (NEC; TSE: ...

NEC Corporation has developed a high-efficiency, compact Power Amplifier Module (PAM) for the sub-6 GHz band, designed for integration into 5G base station Radio Units (RUs). PAMs ...

The PAM incorporates GaN transistors with industry-leading 1 efficiency and Mitsubishi Electric's proprietary matching-circuit technology to reduce power loss. With world leading power efficiency of ...
