Whether you're team password, team fingerprint, or still mourning the loss of actual keys, one truth remains - never store your phone in a locker when you need it to open the locker.

The supermarket locker is a new type of storage cabinet that is hot on the market today. It has a variety of styles, including a self-encoded electronic locker, and a password-type supermarket locker.

Of course, there are different access methods for smart supermarket storage lockers, such as face recognition, fingerprint recognition, swiping card, barcode, digital password and scanning QR code.

Traditional lockers typically used a physical key or metal padlock, however, Smart Lockers can be opened and accessed remotely or with a digital ...

Keyless lockers use digital or electronic locking mechanisms instead of traditional combination locks or metal keys. Access is granted through access codes, swipe cards, RFID, or mobile credentials.

To overcome the security issues faced with the locker system now-a-days, the locker security system is proposed using IoT (Internet of Things), face recognition and OTP (One Time ...

3. The customer should keep the password paper and use the password paper to open the box. The password will automatically expire after one unpacking. If the password is missing, the administrator ...

The invention provides a supermarket locker control system which can provide a paperless locker access mode for users, avoid the problems of printing paper exhaustion, receipt loss or...
