-----

To compare the overall performance of the optimal dispatch strategy and fixed dispatch strategy, the maintenance cost and the income of the hybrid microgrid for a year are analyzed.

The simulated and physical microgrid characteristics are described and the hourly dispatch results for generation, storage and load devices are presented, standing out as a reliable ...

This study proposes an advanced day-ahead economic dispatch framework for wind-integrated microgrids, utilizing coordinated energy storage and a hybrid DR strategy.

Through a robust equivalent process, considering the uncertain characteristics of the renewable energy output and load demand in the microgrid, the uncertain parameters are converted ...

To address these challenges, this paper proposes an optimized scheduling strategy for microgrids based on hybrid, multi-type data-driven methods. First, a multi-stage model is developed ...

Firstly, based on an electrothermal coupling model, the electrolyte dynamic temperature expression of aluminum electrolytic is derived, and the optimal dispatching method of an EA load considering the ...

resources as a real application at the Universidad Pontificia Bolivariana (UPB) campus microgrid. The simulated and physical microgrid characteristics are described and the hourly dispatch results for ...

To enhance the reliability of distributed power generation and facilitate its efficient integration with the power grid, microgrid technology has been identified as an effective solution that has garnered ...
