China has taken production of super-sized wind turbines a giant step further with a new 26-megawatt turbine. In a statement over the weekend, China's Dongfang Electric Corporation (DEC)...

? China unveils the world's largest wind turbine, marking a significant milestone in renewable energy. ? The massive turbine features a 436-foot blade, demonstrating China's leadership ...

China is testing the world's largest single-capacity offshore wind turbine, a 26-megawatt unit, in Dongying City, east China's Shandong Province. The turbine, located at the Dongying Wind ...

On 5 August 2020, a new report revealed by the Global Wind Energy Council stated that China is expected to host more than a fifth of the world's offshore wind turbines, equating to 52 GW, claiming ...

OverviewOffshore windHistoryIssuesSee alsoExternal linksOffshore wind power is a major part of China's clean energy development strategy. The country has a coastline measuring 18,000 kilometers long and is estimated to have up to 750 million kilowatts of offshore exploitable wind power resources. In 2012 China set the goal of 5 GW of installed offshore wind capacity by 2015 and 30 GW by 2020. However, development of offshore win...

The world's largest wind turbine--currently being tested off the coast of China--has blades that are more than twice as long as a Boeing 777's wingspan.

In a major milestone last year, the China Dongfang Electric Corporation finished making the world's largest offshore wind turbine, an engineering giant capable of powering an entire town.

China's Dongfang Electric Corporation has rolled out a 26-megawatt (MW) offshore wind turbine, the world's largest in both capacity and size.
