In Honduras, the effects of climate change are being felt acutely. Coastal areas are grappling with sea level rise, while inland regions face a mix of droughts, hurricanes, and floods. ...

Climate change in Honduras is a major challenge for Honduras as it is one of the countries which is most at risk from climate change. The frequency of natural disasters in Honduras, such as floods, mudslides, tropical storms and hurricanes, is expected to increase as climate change intensifies. Over 40 percent of Hondurans work in the agricultural sector, which is impacted by increasing temperatures and reduced rainfall. However, agriculture could be dramatically impacted, which can hurt certain households in Ho...
