Who is grid consulting?

As part of a global integrated energy company, our international team holds technology expertise, OEM know-how, and a proven track record. Grid Consulting is by your side, every step of the way, to help you make the right decisions, ensuring your success in today's dynamic energy landscape.

How can Intelligent Energy Management Solutions help microgrids & connected grid systems?

Notably, our intelligent energy management solutions for microgrids and connected grid systems with a variety of storage devices and variable DER loads are tested in real-world environments prior to deployment. Our experts propose a process flow to streamline procurement of storage systems and simplify contract management.

What is Siemens Energy Grid consulting?

Siemens Energy Grid consulting: Analysis, modeling and design of power systems and tailored strategies to your needs. Look at project examples.

Which storage technologies are best suited for Energy Management and grid support?

Nearly all thermal, hydrogen, and mechanical storage technologies (excluding flywheels) are suited for long-duration energy management and grid support. In contrast, electrical storage and flywheels are better suited for short-duration storage, offering services such as transient voltage regulation and frequency control in the grid .
