Cyprus enters 2026 with a complex and asymmetrical energy landscape marked by rising electricity demand, fuel import dependence, and the need for climate-resilient infrastructure.

For the first time in Cyprus, households and businesses will soon be able to choose who supplies their electricity. Starting today, 17 companies, ranging from homegrown startups to ...

Expected to produce 160 GWh annually, the project could power over 30,000 households. Although oil accounted for 85% of the country's total energy supply in 2023, Cyprus has ...

The prolonged delay and uncertainty regarding the arrival of natural gas in Cyprus is leading to a readjustment of the initial plans and designs on the basis of which one of the largest ...

Cyprus's energy regulators have called for the immediate installation of new conventional power units at the Dhekelia power station before 2029, warning of potential electricity supply ...

For the first time in Cyprus, households and businesses will soon be able to choose who supplies their electricity. As of Wednesday, 17 companies, ranging from homegrown startups to ...

Around 327 megawatts of renewable energy capacity will be available for trading, representing roughly one-third of average energy demand after excluding household photovoltaic ...

Plans to install two flexible power generation units at Dhekelia power station by summer 2025 are likely to miss their deadline, putting Cyprus' electricity supply security at risk.
