It's an automatic switching circuit that used to control the charging of a battery from solar panels or any other source. It's a 555 based simple circ...

In this circuit I use a PNP transistor as Q1 that is controlled by the voltage output from the solar panel. When it's sunny, the output of the solar cell is high at the transistors base, which opens the transistor ...

Connect the input power supply (DC) in the input terminals from solar panels and using a multimeter, adjust the output voltage by adjusting the screw on the potentiometer.

A simple solar panel voltage regulator circuit may be witnessed in the following diagram, the given switch may be used for selecting a battery charging option or directly driving the inverter ...

In this post I have explained how to construct a simple solar panel regulator controller circuit at home for charging small batteries such as 12V 7AH battery using small solar panel

In this post we will discuss a few simple yet efficient solar voltage regulator circuits using the op amps like IC 741 and TL071. Most common solar panels have an off-load voltage of about ...
