Do I need a license to install solar panels?

But, solar licensing requirements by state vary widely. Some states require a dedicated solar contractor license, while others allow solar installations under an electrical or general contractor license. The exact license you need depends on where the work is performed and whether the project includes electrical, structural, or roofing scope.

Do solar PV systems need a license?

Because solar PV systems must comply with the National Electrical Code, states use licensing requirements to ensure installers have the technical knowledge to complete safe, code-compliant installations. Failing to meet licensing requirements by state can delay solar permits, void inspections, or expose contractors to fines and liability.

Do solar installers need a license in California?

California has one of the most clearly defined solar licensing frameworks in the U.S. Solar PV installers must hold a C-46 Solar Contractor License, which is specifically designed for solar energy systems. The C-46 license authorizes contractors to:

Do I need a permit to install solar panels?

The requirements for solar panel installations are different depending on the city, county, and state. While several places mandate electrical permits, others require a building permit specifically for solar panels. Certain cities may have a designated permit for solar panels.
