Vietnam's solar power industry has experienced rapid growth in recent years, driven by favourable government policies and increasing demand for renewable energy.

As of 2025, Vietnam boasts an installed solar capacity of around 16 GW, a dramatic increase from approximately 4 MW in 2015. This growth trajectory has made Vietnam one of Southeast Asia's ...

Under the Law of Electricity 2022, the development of energy sources, including grid-connected solar power plants, must align with national power sector planning policies.

Vietnam's clean energy transformation was one of the fastest in Southeast Asia. Between 2018 and 2023, the country scaled up its solar and wind capacity from virtually zero to over 21,000 ...

OverviewSolar energyHydropowerWind energyBiomass energySolid waste energy (waste-to-energy)Geothermal energyTidal energyBy the end of July 2021, the total solar power installed capacity was about 19,400 MWp (of which nearly 9,300 MWp is rooftop solar power), equivalent to about 16,500 MW, accounting for about 25% of the total installed capacity of all sources in the national power system. Generous FITs and supporting policies such as tax exemptions are found to be the k...

Vietnam possesses an estimated solar potential of 963,000 MW - a staggering figure that dwarfs its current capacity of 16,600 MW. With 72 GW of potential offshore wind projects along its ...

One of the many benefits of solar power is the speed and scale at which it can be deployed. But, despite this, some states still manage to exceed expectations. Viet Nam is one such ...

More than 100,000 rooftops in the country had solar panels, according to the trade ministry's website last year. And with this year's scorching summer weather highlighting the risk of an ...
