Solutions adapted to enclose and protect technological systems against seismic adversity. Racks and enclosures constructed with superior strength and rigidity to protect operating and communication ...

You can protect your telecom cabinet power systems with practical strategies. Anchoring cabinets and increasing connecting bolts offer cost-effective reinforcement.

Featuring lithium-ion batteries, integrated thermal management, and smart BMS technology, these cabinets are perfect for grid-tied, off-grid, and microgrid applications. Explore reliable, and IEC ...

It is designed for secure, high density server and networking applications in IT environments that are earthquake prone or subject to regular vibration, such as an airport or factory.

We work with companies to custom manufacture seismic cabinets to fit their requirements. Working with Juniper, we manufactured this custom seismic rack to fit their MX2020 router, which is a 45RU high. ...

An enclosure's seismic load capacity indicates how much weight a cabinet or rack can hold and protect equipment during a seismic event. The higher the seismic load rating, the more ...

For Optical Distribution Frame installations, DCX Seismic Cabinets are fully configurable, front-access cabinets that serve as a high-density fiber interconnect or the main building block for a large fiber ...

Our storage systems feature seismic-resistant, moment-resisting reinforcements, offering the strength and flexibility to evenly distribute seismic forces and absorb energy without collapsing.
