Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year.

Burundi produces 0.36 terawatt hours (TWh) of electricity annually, according to 2022 estimates--among the lowest totals in the world (particularly low taking into account the size of the ...

Access to electricity (% of population) - Burundi SDG 7.1.1 Electrification Dataset, World Bank ( WB ), uri: [trackingsdg7.esmap.com/downloads](https://trackingsdg7.esmap.com/downloads), note: Data is downloaded from ESMAP website.

A new World Bank-financed project will support the increase of electricity access in Burundi and help to improve the country's energy sector performance.

National access to electricity remains under 12%, highlighting persistent distribution challenges. Burundi has achieved unprecedented growth in electricity production capacity over the ...

Burundi is among 17 African countries that committed Wednesday to concrete reforms aimed at boosting electricity access under Mission 300, a global initiative led by the World Bank ...

Burundi's total production of electricity was of 232 gigawatt hours (GWh) in 2018. The main source came from a total of nine dams supplying the major part of the electric energy and 100 GWh coming from geothermal and thermal sources. Consumption in 2018 was estimated at 315.6 GWh of which 273 GWh were consumed in Bujumbura, 18.7 GWh in Gitega and 23.9 GWh by the rest of the country.

Burundi's electricity mix includes 53% Hydropower, 24% Unspecified Fossil Fuels and 2% Biofuels. Low-carbon generation peaked in 2020.
