US battery manufacturing capacity has grown in recent years, but it can't meet domestic demand for energy storage. Those factories will also be impacted by China's new restrictions.

China is preparing to tighten the flow of critical materials used in energy storage. The Asian giant, which currently dominates the global lithium-ion battery market, is set to introduce major ...

Roughly half of that came from China, highlighting the extent to which battery and component shipments to key US industries are caught in the crossfire of escalating trade tensions ...

New analysis from Clean Energy Associates (CEA) and Wood Mackenzie highlights the challenges facing the US battery storage market due to trade tariffs.

In February, China announced the removal of the energy storage mandate for renewable projects, effective from June, as part of a broader move to expose renewables to pure market forces. ...

China's exports of lithium iron phosphate (LFP) energy storage batteries to the US are expected to recover in the coming months given reduced tariffs agreed upon by Washington, ...

China's recent decision to restrict exports of lithium iron phosphate (LFP) and lithium manganese iron phosphate (LMFP) battery cathode active material technology is more than just a ...

China's proposed export ban on battery technology has the potential to reshape global supply chains and impact the renewable energy transition. Batteries are a key pillar within the global ...
