How much flammable liquid should be stored in a paint storage building?

Paint or other flammable liquid storage that exceeds 60 gallons must be stored in a paint storage building to protect flammable liquids against flash fire, prevent paint containers from building excessive internal pressure and contain flammable liquid spills or leaks.

Should paint be stored in a fire rated chemical storage building?

Keeping your paints stored in a fire-rated chemical storage building allows for full compliance. Whether storing paint containers or waste, flammable chemical storage buildings by U.S. Chemical Storage offer a safe and protected storage solution.

Do you know the rules for paint storage?

The Isosceles Group PAINT STORAGE - Do You Know the Rules? Within any commercial, industrial, warehouse, or other business operation, regardless of size, paint storage is regulated by the Occupational Health and Safety Administration (OSHA), National Fire Protection Association (NFPA), and often your municipality.

Can paint be stored in a container?

Furthermore, OSHA regulations state "for quantities of one gallon or less, the original container may be used, for storage, use and handling of flammable liquids," including paints. All paints should be stored in a climate-controlled environment, away from incompatible materials.

Assume the booth is located inside a machine shop and is adjacent to, but separated by distance from, other machines and work processes that share the same room. Assume the paint ...
