We expect Europe to install 187 GW of new wind power capacity over 2025-2030. The EU-27 should install 140 GW of this - 23 GW a year on average. This would bring total installations ...

Several European countries experienced wind power capacity growth in 2024. Germany led the way, installing the most new capacity at 4.0 GW, with 82% coming from onshore projects. ...

To accelerate wind energy manufacturing across Europe, the Commission presented the EU Wind Power Package in October 2023. It consists of 2 initiatives - the European Wind Power ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

Two decades ago, the European Union got basically none of its power from wind and solar. Now, those are the leading sources of electricity in the bloc. In 2025, wind and solar produced more ...

In 2017, a total of 15,680 MW of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity ...

Almost 10 years later the world's first offshore wind farm was erected off the coast of Denmark. The industry has come a long way since then. The total wind power capacity in Europe has...
