To promote the uptake of electrification, it is important to understand consumers' opinions about electric vehicles. The aim of the present research is to investigate the factors influencing EV ...

Here's the straight talk: Greece's electric car registrations have exploded from virtually zero to over 15,000 vehicles in just five years. This isn't just a number--it's a seismic shift in how ...

Electric vehicle adoption in Greece is accelerating rapidly as the government introduces new incentives and expands charging infrastructure nationwide. Greek consumers are increasingly ...

The National Electromobility Strategy serves as the foundation for future policy and investment. As Greece embarks on this transformative journey, the challenges are clear, but so are ...

The uptake of electric vehicles (EVs) in Greece remains very low: in 2020, EVs accounted for only 2.6% of new car sales, compared with the European Union (EU) average of 10.5%.

Abstract: Electromobility represents a strong option for reducing carbon emissions in the road transport sector. This study presents a methodology and a simulation tool that project the evolution of the ...

The use of electric vehicles has increased in recent years. Previous research has examined several factors influencing the adoption of electric vehicles and related sustainability issues.

These findings, published by Eurostat, highlight the varying rates of electric vehicle adoption across the EU, with Greece among the countries slower to embrace this shift towards ...
