In this article, we explain the four key wind speed levels that determine when a wind turbine starts working, produces full power, stops, and how much wind it can survive.

Do not underestimate the effect of tower height on wind generator output. For best wind capture your turbine should be at least 20 feet above the tallest trees or structure within 300 feet of ...

Inverter generators offer a portable and reliable power source, but selecting the right size and type is crucial for optimal performance and safety. Let's dive into the world of inverter generators ...

Discover the 7 best portable generators for powering your chainsaw when batteries fail. Compare models based on wattage, runtime, and portability to find your perfect match for any cutting job.

As a general rule, I recommend choosing an inverter generator that has at least 20% more capacity than your calculated peak wattage. This provides a safety margin and helps to extend ...

Discover how much wind a turbine needs to work efficiently. Learn about cut-in speeds, tower height, wind maps, and site analysis in this guide.

determine the installation location's basic wind rating speed. While most of the United States has a basic wind rating speed of 110 miles per hour, special regions, particularly along the Atlantic and Gulf ...

In accordance with ASCE 7-98, this code requires buildings and other structures to withstand high wind forces, with Miami-Dade and Broward counties having to withstand wind speeds of 146 mph and 140 ...
