The 1960s saw fundamental advances in four important areas of communications technology: data transmission through the analog voice channels of the telephone network, computer networking, ...

A total of 53,460 third-generation (3G) and fourth-generation (4G) base transceiver stations (BTS) have been deployed in Nigeria in the last five years.

Base Stations Enable Mobile Communications  
Antennas Are Placed in Various Locations  
More Mobile Devices Means More Base Stations  
Base Station Output Power Is Low  
Exposure Limits Are Set by Independent Organizations  
Exposure Levels Are Much Lower Than The Limits  
Public Access Is Restricted Where Needed  
No Adverse Health Effects According to The Who  
Each base station can only serve a limited number of mobile devices at a time. As the number of mobile devices in a community grows, more base stations are needed. For that reason, more antennas are needed in such crowded locations as shopping malls where there are many mobile phone users. However, the shorter the distance between base station ante...
