The tariff on energy storage batteries in the United States varies based on several factors and is subject to ongoing changes influenced by trade policies and market conditions.

By January 2026, the comprehensive tariff on Chinese-made batteries and energy storage systems in the US will reach an astonishing 48.4%. This figure will undoubtedly put enormous ...

Proposed tariff increases on Chinese lithium-iron-phosphate (LFP) battery imports threaten to disrupt the United States' deployment of battery energy storage systems (BESS), a ...

Depending on the severity of potential tariff increases, the cost of utility-scale BESS could rise between 12% and 50% across three tariff scenarios modelled by Wood Mackenzie analysts.

Baseline Tariff: The regular, standard 3.4% tariff rate on imported batteries regardless of their origin. It's important to note that tariffs on EV batteries were even higher during this period.

Tariffs on Chinese-origin lithium-ion non-EV batteries are scheduled to increase to 25% effective January 1, 2026. Otherwise, batteries of non-Chinese origin storage batteries have not been ...

Explore how 2025 battery tariffs affect U.S. imports, energy storage, EV production, and sourcing strategies amid rising China tariffs and trade shifts.

But one critical question remains: How much is the tariff for energy storage batteries? This article breaks down costs, regional policies, and market trends to help businesses navigate this complex landscape.
