-----

Hosted at Borealis Data Center, a secure facility powered entirely by sustainable energy, the cloud is built using Fish OS, Sardina's OpenStack, with both block and object storage using Ceph.

A data center in Iceland will minimize your carbon footprint and reduce long-term costs. Iceland produces reliable and cost-competitive electricity, and rates for long-term industry contracts ensure ...

Data centers are hungry for power, and last year electricity use by large data centers in Iceland more than doubled. In 2019 it's expected to rise again, by nearly 50%.

Iceland's sustainable model offers a scalable, low-carbon path for high-performance computing as global A.I. energy demand grows.

Iceland is an unrivaled location for data centers, offering a unique combination of natural, economic and technological advantages. Its electricity is powered by a sustainable mix of geothermal and ...

Iceland's cold climate and renewable energy infrastructure have attracted global tech companies to establish data centers in the country. These facilities benefit from natural cooling and ...

Iceland's climate is well-suited for data centres. It is not just that it is cold, but that the temperature does not fluctuate much. The stable cool temperatures mean data centres are able to ...

Iceland has long pitched itself as a perfect place for data centers, thanks to its cheap, clean power, and cold temperatures. But, for years, the majority of the companies that answered the ...
