Constructed with a distinctive icosahedral shape and clad in corrugated metal, these modular cabins harness solar energy to provide sustainable shelter for trekkers navigating Iceland's rugged landscapes.

The courtyard as a passive solar system was developed mainly in response to climatic requirements. Poor or inappropriate design may create challenges for controlling temperature, glare, and energy ...

The design considerations for a food-growing greenhouse, a living space and a supplementary solar heater are very different, and although it is possible to build a sunspace that will serve all three ...

Emphasizing sustainability through the integration of solar panels and a central courtyard, the design redefines family living in a contemporary context.

Solar panels atop steel pyramids illuminate pathways leading to caves, while a tower composed of structural steel and wooden elements integrates seamlessly into the Icelandic landscape, serving as ...

Utilizing reclaimed wood and natural clay plaster, this retreat integrates passive solar design and a green roof to create a sustainable living environment for community gatherings in Iceland's unique ...

Constructed with prefabricated interlocking modules and utilizing solar energy, these cabins seamlessly blend durable materials and innovative design with their natural surroundings, providing essential ...

Together, these typologies comprehensively capture the variations in courtyard design, making them excellent choices for evaluating solar potential and thermal comfort.
