According to Climate TRACE, Indonesia has shown back-to-back emissions reductions in early 2025. As one of the world's top greenhouse gas emitters, Indonesia's trajectory has major ...

"Indonesia's new climate plan marks an important step forward, building on earlier commitments with an absolute target to reduce emissions by 2035. It strengthens transparency and ...

Compared to the ENDC CM2 scenario, which projects emissions of 1,632,000 Gg CO₂e in 2030, Indonesia's emissions are expected to be 8 -17.5% lower. The emissions will decline in 2035 ...

Indonesia's commitment in Paris Agreement to reduce emissions by 29% by 2030 Bappenas (National SSDGs Secretariat) has made Goal 13 (Climate Change) of SDGs as the foundation of the three ...

Push for measures to reduce emissions along with carbon tax, carbon trading, and carbon border adjustment mechanisms. Create aggressive deforestation prevention and ecosystem ...

Each country is expected to map out the peak of carbon emissions before phasing them out to prevent fatal global warming. But Indonesia is moving the opposite way.

Belém, Brazil (ANTARA) - Minister of Environment Hanif Faisol Nurofiq announced the target set by Indonesia to reduce emissions by 1.2 to 1.5 gigatons of CO₂ equivalent by 2035, ...

For Indonesia, this means cutting its net 2030 GHG emissions (including LULUCF) to a range of 66-75% below 2015 levels, or a reduction of 0-28% in gross emissions (excluding LULUCF) below 2015 levels.
