How do you plug a generator into a refrigerator?

Run a heavy-duty, outdoor-rated extension cord from the generator to the refrigerator's location. Use at least a 14 gauge cord for refrigerators. Plug the cord into the outlet on the generator first, then into your refrigerator directly instead of using the wall outlet.

How do you install a generator in a house?

To install a generator in a house, start at the outside corner of the room where the generator will be installed with the generator's power cable. Run the cable through the hole cut in the drywall and continue running the generator's power cable through the house until all the cables are in place. Then run the line cords next.

Can a generator run a refrigerator?

Use at least a 14 gauge cord for refrigerators. Plug the cord into the outlet on the generator first, then into your refrigerator directly instead of using the wall outlet. Start up your generator, let it reach full speed, then turn on your refrigerator. Listen and watch that it powers on and starts cooling normally.

How do you put a refrigerator in a new cabinet?

Last but not least, you need to put your refrigerator into the newly-built cabinet. Use a large piece of laminate on the floor so that you can slide the refrigerator in without damaging anything. Once it's in, pull the laminate out while tilting the fridge. Now, you have a modern, classy looking kitchen with a lot more storage.
