Learn how terminals are embracing renewable energy, highlighting solar, wind, electrification & grid resilience with LBCT.

Most PV panels have a warranty of 25 years or more, making them a good long-term investment and fit for container terminals, which typically feature leases of 25 years or longer.

"By working hand-in-hand with PNCT and the city of Newark, our seaport is now home to a large solar energy project capable of generating significant energy for one of its major container ...

At the Port Newark Container Terminal in New Jersey, solar panels have been shoehorned into a tightly packed, high-traffic shipping facility, without disrupting operations or taking up...

This article aims to explore the role of solar energy in sustainable shipping and ports, discussing its benefits, integration in port infrastructure, collaboration and partnerships, and future ...

Solar energy can be seamlessly integrated into various aspects of port infrastructure. Installing solar panels on rooftops and parking structures not only generates clean energy but also optimizes the ...

We select these four challenges of electrification for container terminals in this blog to highlight what we often hear from ports and terminals. To address these challenges with proper assessment and ...

Can the Marine Industry benefit from Solar Energy and Energy Storage Systems? In this article we analyze why this is the best option.
