Estonia has achieved an unprecedented increase in photovoltaic (PV) solar installations, adding 513 MW in 2024, marking a historic milestone for the country.

The Estonian Chamber of Renewable Energy estimates cumulative solar PV capacity in the Baltic nation reached 1.3 GW at the end of 2024. [2] Solar power accounted for 11.8% of Estonia's electricity ...

Renewable energy consumption in Estonia is steadily increasing, surpassing the EU average. By 2023, 41% of energy production came from renewable sources. Estonia's renewable ...

Currently, there are over 250 megawatts of large-scale solar parks under construction, which could start operating within the next year. Based on this, it is projected that by the year 2025, ...

Estonia's renewable energy sector marked a major milestone in 2024, attracting EUR244 million in investments from the European Bank for Reconstruction and Development (EBRD). This ...

It will be the biggest photovoltaic (PV) production site in the Baltics with capacity of 244 megawatt peak (MWp) - enough to power more than 80,000 households in Estonia.

The European Investment Bank (EIB), together with local commercial banks SEB and Luminor, is lending the Estonian renewable energy company Sunly EUR62 million to build and operate a ...

Estonia completed several major solar projects in 2024, including the 77.53 MW Kirkme solar farm, developed by Estonian energy company Evecon and French asset manager Mirova.
