These programs are designed to provide girls and women with support and with role models so that they know they can succeed in these fields. Ultimately this will increase the participation of women in ...

The solar energy sector is seeing a quiet revolution - and it's being powered by women wielding wrenches and multimeters. While girls working on photovoltaic panels still face raised eyebrows ...

Despite the number of women increasing, the proportion of women that make up the solar workforce has remained relatively the same, increasing just three percentage points from 2018 to 2023, suggesting ...

This article profiles seven successful founders and entrepreneurs in the solar energy field as examples of the possibilities for women to set up organisations and have pioneering roles in the ...

It is difficult for women to find employment as PV installers, and women account for nearly 12% of all of them. It's no secret that women are underrepresented in the energy sector.

This effort must include a focus on women, who currently make up only a small percentage of the existing workforce in solar, and who rarely feel empowered to take on their own DIY solar projects. If ...

Girls Inc. thought it was a great idea, and a company was hired to install 564 solar panels on 12,000 square feet of roof. The benefit of the clean energy source to the environment alone would be equal ...

Female solar technicians in Gujarat benefit from renewable energy careers not just through incomes but also the ability to help their communities by building a sustainable energy ...
