Are solar power shortages a problem?

The use of solar power is growing rapidly, especially in developing regions in the tropics, as countries work toward meeting carbon neutrality goals. But according to new research, solar power use is also accompanied by solar power shortages, or "droughts," when demand exceeds supply for at least 3 days.

Will solar power slow down?

The Energy Information Administration, in its Short-Term Energy Outlook, is predicting a slowdown in the deployment of solar capacity in the United States, even before the Trump administration begins examining the technology's relative costs and benefits to U.S. energy and economic security.

Could solar power be causing a slowdown in 2025?

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That slowdown means that most of the increased demand could have been met by the astonishing growth of solar power.

Why is solar power a problem?

More communities are relying on solar power as a source of renewable energy, but increasing demand and climate change threaten its reliability. Solar power droughts can be driven by weather extremes such as clouds, rain, and extreme heat, as well as light-blocking pollution and periods of extremely high demand.

This article explores why the solar industry is struggling, what it means for the clean energy transition, and how governments and homeowners can adapt. From climate impacts to ...

But according to new research, solar power use is also accompanied by solar power shortages, or "droughts," when demand exceeds supply for at least 3 days. Such shortages can leave...

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

Is there a shortage of solar panels? Given the tax credit rush and the supply chain issues described above, there are shortages for certain high-demand solar panels.

As of yesterday's data release by the Energy Information Administration (EIA), which covers the first nine months of 2025, total electricity demand has risen by 2.3 percent. That ...

Solar power shortages are increasing due to rising demand and climate change. Learn how to adapt and harness renewable energy today!

The extra layer of scrutiny for wind and solar contrasts with actions by the Trump administration to make it easier and cheaper for companies to produce oil, coal, gas and nuclear power.
