Located on CIRI-owned land within the municipality of Anchorage, CIRI's Fire Island Wind Project delivers renewable, emissions-free energy to more than 7,000 homes in Southcentral Alaska.

America's first energy island, Block Island Wind Farm, generates clean wind power for an entire island plus 12,500 mainland homes while creating new marine habitats and boosting local ...

When wind is not blowing, and to access cheaper sources than the wind farm, Block Island buys power from the grid along with carbon offsets. Starting in November 2025, it will source only 100% ...

Fox Islands Wind (FIW) is a 4.5 MW wind generation facility located on Vinalhaven Island in Penobscot Bay, Maine.

Since that day, Block Island has been the only community in the United States fully powered by offshore wind: in this case, five 6-megawatt turbines pounded into the seafloor just south of the...

The Fire Island Wind project is an important step toward energy diversification in the Cook Inlet region, providing a reliable source of electric power to Southcentral Alaska.

Learn about the Ocean SAMP, the Block Island Wind Farm and the other projects by clicking on the links below.

For more than a decade, Massachusetts and several other New England states have been banking on a large expansion of offshore wind.
