---

Our greenhouses, as well as everything that comes from our company, are rigorously monitored by the quality control office and the materials used are always rigorously made in Italy.

Ten years ago we were the first to enter the world of renewable energy, launching on the Italian market the first agricultural photovoltaic greenhouses with roof-integrated solar panels.

The Solar Innova photovoltaic greenhouses are calculated and constructed to resist both the weight of its own roof with photovoltaic modules and other loads such as rain, wind and snow.

Before learning about solar panels for a greenhouse, you need to learn whether you can power a greenhouse with solar panels or not. Indeed, solar panels can provide energy to operate the ...

Technical volumes may include boiler rooms, spaces for storage tanks for solar thermal systems, shafts for plumbing and even the bio-climactic solar greenhouse. When can the regulations not be applied? ...

This article explores Italian photovoltaic panel greenhouse specifications, their technical advantages, and real-world applications. Whether you're planning a greenhouse project or exploring renewable ...

The study focuses on next-generation agrivoltaic greenhouses, which integrate photovoltaic systems with agricultural practices. These greenhouses not only produce renewable ...

By harnessing solar energy, solar-powered greenhouses create sustainable growing conditions for plants, regardless of external climate variations. This guide explores how solar ...
