How often is too often to top up the charge on a (new) 2022 M3 RWD w/LFP battery? At the moment we're plugging it back in after even ultra short trips using as little as 1% of the battery. ...

Discover what happens when LiFePO4 batteries sit unused, how storage affects their health, and the best ways to protect and extend their lifespan.

We need to use a USB / car battery that's rated for higher temperatures to avoid battery swelling, leakage, or fires. 12V LiFePo4 is what's usually recommended. Frankly I don't want to risk ...

This guide provides concrete data, expert insights, and actionable strategies to maximize your LiFePO4 battery's lifespan, whether you're powering ...

Learn about the impressive lifepo4 battery life and factors affecting longevity. Find out why these powerhouses outlast rivals and how to maintain them to function ...

Regarding the question of whether LiFePO4 batteries are durable, the answer is yes. Lithium iron phosphate batteries are more durable and perform better than ...

Coming up on 3 years and roughly 100,000 miles with an Ohmmu LifePo4, Zero issues what so ever. A deep cycle battery is required for a Tesla, not a starting battery. Part of the problem ...

One reason I don't think I would install a LiFePO4 battery in my Model 3 is because in the summer, the car floats the battery voltage at around 13.4V once it's fully charged. On a LiFePO4 ...
