Union Budget 2026 prioritises electric mobility with customs duty exemptions on battery manufacturing, support for lithium-ion cells, and incentives for energy storage and rare earth ...

Manufacturers located in China are able to maintain lower prices because of certain industrial practices or policies, which commonly occur there, such as vertical integration, economies ...

While achievable goals, they are contingent on reliable and sustainable supplies of large quantities of high-capacity lithium-ion (Li-ion) batteries. The U.S. Department of Energy's (DOE's) ...

The study highlights the sensitivity of BESS deployment to both tariff levels and technological learning rates, with higher tariffs exacerbating declining adoption. Despite these ...

North America's battery storage market is booming--driven by policy incentives, falling costs, and smart tech that strengthens grid resilience and renewable integration.

Learn the federal incentives driving the industry and where it's headed. Demand for critical minerals in electric vehicle (EV) and battery storage applications is expected to grow by at least 30 times by 2040.

Among the many tax incentives the bill gives to clean energy industries, it provides massive support for the lithium-ion battery (LiB) value chain for electric vehicles (EVs) and energy storage.

With demand for critical battery minerals, such as lithium and graphite, projected to increase by as much as 4,000% in the coming decades, this latest round of funding supports the recycling and reuse ...
