Last week, Mexico recorded the hottest day in its history, scientists have stated, with temperatures in the Sonoran Desert hitting 125 degrees.

This study analyzes the technical and economic feasibility of hybrid photovoltaic/thermal (PVT) solar energy systems, comparing them with independent flat plate solar thermal collectors...

This graphic shows the mean temperatures of various destinations in our solar system.

In this study, the relation among different meteorological variables and the electrical power from photovoltaic systems located at different selected places in Mexico were presented. The data...

Impact on Solar Panels: High temperatures in northern and central regions slightly reduce panel efficiency due to the temperature coefficient, though abundant sunlight compensates. Tropical ...

Last week, Mexico recorded the hottest day in its history, ...

This relatively small world is the most volcanically active body in the Solar System, with roughly 400 active volcanoes dotting its surface. These volcanoes erupt lava and gasses, sometimes ...

Using observations from the National Space Weather Laboratory's (LANCE acronym in Spanish) ground-based network, we characterize regional space weather conditions in Mexico during ...
