The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap.

Declining costs of energy storage technologies, particularly lithium-ion battery storage, opens the potential for larger capacity and longer-duration energy storage projects to provide a broader range ...

Grid operators, federal and state policymakers, utilities and other stakeholders are presently working together to create the right economic and market conditions to ensure that energy storage continues ...

The report highlights best practices, identifies barriers, and underscores the urgent need to expand state energy storage policymaking to support decarbonization in the US.

All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal.

Long-duration energy storage (LDES) will play an increasingly important role in decarbonizing the power sector as more variable renewable energy is added to the electric power grid. LDES is defined by the ...

ESS policies are primarily found in regions with highly developed economies, that have advanced knowledge and expertise in the sector. This paper provides a comprehensive review of ...

In December 2020, DOE released the ESGC Roadmap, the Department's first comprehensive energy storage strategy to develop and domestically manufacture energy storage technologies that can ...
