-----

US utilities and power producers will add 26GW of solar capacity in 2025 and 22GW in 2026. Coal plant retirements will accelerate, with 11GW retiring in 2025 and 4GW in 2026. Credit: ...

The object is to stabilize energy prices for generations to come by adopting the lowest cost, unsubsidized solar and wind production and distribution systems. We believe it is only a lack of ...

That old moniker has now lost its meaning: In 2024, the U.S. power industry is choosing clean energy for almost all its new capacity additions. This is a big year for power plant construction ...

Here is a list of the largest planned solar projects in development in the US --ranked by planned capacity in megawatts. These projects are expected to come online in the coming years. Scroll down ...

Installing solar power in your new home requires five important steps. Understanding this process will help you plan effectively, maximize savings, and ensure a smooth installation.

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power generation over the next ...

SRP offers demand- and export-based plans for customers with on-site generation (e.g., rooftop solar systems) and battery energy storage systems.

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...
