WASHINGTON --The U.S. Department of Energy (DOE) today issued an emergency order to mitigate blackouts in New York and the surrounding area following Winter Storm Fern.

Our flagship report explores the issues and challenges shaping the grid of the future based on the latest facts and data, information, and figures. This year's report spotlights the uncertainty inherent in ...

North Korea faces significant energy shortages primarily due to its reliance on coal and hydroelectric power, which have become increasingly inefficient and inadequate to meet the country's needs.

A hydrogen bomb detonated at a high altitude would create an electromagnetic pulse that would knock out key infrastructure - namely prominent parts of the U.S. electrical grid.

Forty years ago this week, lightning struck an electrical power station, blacking out the city of New York and surrounding suburbs.

In Europe, cross-border electricity trade is a well-anchored reality with many existing power interconnections enabling to effectively share electricity throughout the entire continent. This ...

North Korea suffers from chronic energy shortages. Rolling blackouts are common, even in the nation's capital, while some of the poorest citizens receive state-provided electricity only once a ...

National Grid delivers reliable and resilient energy to more than 20 million people in New York and Massachusetts, all while transforming our energy networks for the future.
