This report outlines a series of approaches that utilities and their regulators can adopt that provide a "softer path" to rate design and further reduction in solar PV cost.

Installed at photovoltaic (PV) sites to address supply-demand balancing needs. Although there is some understanding of costs associated with PV operations and maintenance (O&M), costs associated ...

Tariffs remain at the center of the discussion about what's next for the U.S. energy storage market as they continue to reshape project economics, according to the Q1 2025 reports on ...

In recent years, the pricing landscape for utility-scale power purchase agreements (PPAs) in the United States has increased notably, prompting many stakeholders to reconsider their ...

Though P.L. 117-169 - Inflation Reduction Act of 2022 ("the IRA") provided for unprecedented incentives for solar PV and energy storage projects and their supply chain, the ...

A recent Wood Mackenzie report examines two possible tariff scenarios and concludes that costs will skyrocket for both utility-scale solar development and battery energy storage systems.

In addition to legislative risks, recent federal actions have introduced new tariffs that significantly impact solar photovoltaic (PV) systems and energy storage components.

NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown ...
