The Teknos product family for wind blades consists of a full range of products, from priming to finishing paints, and putties. Teknos' advanced coatings technologies enhance the efficiency, performance ...

Several test rigs have been in operation since 1970. Most known are Saab, Polytech, Uni Limerick, Uni Strathclyde, Fraunhofer IWES. Glass fibre reinforced epoxy specimen with a coating system. Length ...

We develop high-performance coatings for every component of your wind turbines, from towering blades to submerged foundations, maximizing uptime and safeguarding your assets even in the harshest ...

One of the main advantages of blast painting for wind turbine blades is the surface preparation. The abrasive blasting part of the process can really dig deep and get rid of all the grime ...

Okay, let's dive into blade painting for wind turbines. It's a surprisingly complex and crucial aspect of wind turbine operation and longevity. Here's a breakdown, covering the 'why,' the 'what,' the 'how,' ...

Sherwin-Williams coating systems are qualified to global wind energy OEM specifications for use on composite wind turbine blades. The coating system is appropriate for utility size to small wind blade ...

The challenges for wind blade coatings are increasing as wind turbines become more powerful. Resistance to abrasion and erosion caused by weathering is just as important as permanent elasticity.

Teknos has developed paints and coatings specially for wind turbine blades. Our turbine blade coating product family consists of a full range of products, from priming to finishing paints, and putties as well ...
