-----

Palau's climate action has evolved since the 2015 release of its first Palau Climate Change Policy (PCCP), which focused on adaptation, disaster risk reduction, and mitigation.

The platform, announced by President Surangel Whipps Jr. on March 5, 2025, serves as a central hub for citizens, policymakers, and stakeholders to access critical information on climate ...

Air temperatures have risen in Palau, and hotter days and nights affect human health. Heatwaves can exacerbate a range of preexisting health issues, and hot weather poses a particular ...

Although rainfall in Palau is plentiful, increasing atmospheric temperatures and saltwater inundation as a result of climate change may threaten freshwater supplies.

Warming, sea-level rise, ocean acidification, and heavy rainfall events already affect Palau and will likely intensify in the future. The warming trend observed from the 1950s is expected to continue even with ...

Pacific Island countries have long been at the forefront of climate, ocean and biodiversity protection. Last week our team headed to the Palau, to meet with community and government ...

With information drawn from the 2020 Pacific Islands Regional Climate Assessment report, the video presented provides simple and basic ideas at the elementary level behind climate change and its ...

Aguon, 56, has been operating diving and deep-sea fishing charters out of a dock in Koror, the capital of the tiny Pacific nation of Palau, for 25 years and has noticed significant changes ...
