Compared with PSO, the global search ability of the improved particle swarm optimization (IPSO) algorithm is improved. IPSO is used to optimize the scheduling of the microgrid grid connection model.

To optimize the economic and environmental performance of island microgrids operating in grid-connected mode, this study proposes an advanced scheduling methodology based on an ...

Watch for weak intensifiers and qualifiers; sentences are more forceful without them. Notice how much clearer the following sentences are without the words in brackets: We found the proposal [quite] ...

In order to tackle these difficulties, a framework for dual-objective optimization was developed with the aim of improving both economic efficiency and environmental sustainability in microgrids that ...

This study presented an optimal scheduling framework for a distribution microgrid, integrating various resources, including photovoltaic (PV), wind turbines (WT), micro-turbines (MT), ...
