A guide for choosing, installing, and flashing roof anchoring systems for solar panels.

Snow guards are barriers installed between or on the edges of solar panels to hold or break up snow before it slides off the roof. By creating a controlled release of snow as it slides off ...

Sika® SolarMount-1 (SSM1) - an aerodynamic, non-penetrating and lightweight mounting system specially designed for the installation of rigid photovoltaic (PV) panels to flat rooftops, covered with ...

In short, yes, solar panels can provide a degree of protection to roofs. They act as a barrier against environmental elements such as rain, hail, and UV rays, which can cause wear and ...

It is a barrier placed between or on the edges of solar panels to stop small avalanches that happen with rooftop solar. These snow guards catch sliding snow, preventing it from falling all at ...

Installing a solar system on your roof is a great way to take advantage of underused space. While roofs provide the obvious benefits of keeping us safe and dry, we can't use them for ...

The snow fence solution is designed to attach to the roof separately from the solar panel to minimize the impact on the panel itself. These can be installed easily after solar panels are in ...

If these conditions exist, it's important to have the solar panels installed such that there is at least 18" of roof exposed between the bottom solar panel and the eave edge. This is where the snow fence will ...
