This paper presents approaches that specifically support resiliency through design of PV systems utilizing community energy storage, solar-diesel hybrid systems, and micro-grids.

The Federal Energy Management Program (FEMP) provides this tool to federal agencies seeking to procure solar photovoltaic (PV) systems with a customizable set of technical specifications.

Matching the lab to the specific course of instruction is critical to the success of the instruction. The following section describes typical classroom specifications and examples of PV laboratory mockups ...

This document serves as a written summary of some of the elements required for the design, specification, construction and operation of a successful laboratory for the training of ...

Provide guidance to designers and installers of our PV projects. It outlines the key attributes of, and expectations for, PV systems on APS projects. It is the District's intent to incorporate solar power ...

This paper describes the design and development of a rooftop PV lab setup to facilitate various experiments to provide the students with systematic hands-on training and improve their engineering ...

The 6-hour course covers fundamental principles behind working of a solar PV system, use of different components in a system, methodology of sizing these components and how these can be applied to ...

The RERH specifications and checklists take a builder and a project design team through the steps of assessing a home's solar resource potential and defining the minimum structural and system ...
