GCL New energy takes the opportunity of oil peony planting, and combines the development of peony industry with precision poverty alleviation and rural tourism.

Several projects across the country are researching the synergistic benefits of co-locating photovoltaic arrays on vegetable and fruit farms. Potential benefits to the crops will derive from lower ...

In this guide, we'll show you how to grow peonies that come back stronger each year, plus where to plant them, how to extend their bloom season, and why they're the floral royalty of any garden bed.

The following selections represent the top performers that farmers should consider when implementing solar panel agriculture on their land. Each offers distinct advantages and has been ...

The U.S. Department of Energy Solar Energy Technologies Office (SETO) is working to better understand the economic, ecological, and ...

The invention provides a planting method for oily peony under a photovoltaic panel of a photovoltaic power station. The planting method comprises the following steps: site selection, facility installation, ...

The U.S. Department of Energy Solar Energy Technologies Office (SETO) is working to better understand the economic, ecological, and performance impacts of co-locating pollinator habitat ...

Intentional use of targeted plant species will enhance the positive impacts of a solar array for pollinators. When pollinator habitat is a primary goal, planning for these goals in the pre ...
