How do solar panels work?

Using a Solar Panel to See Sound and Hear Light: Normally we use speakers to hear music that comes from an electronic audio source, like a stereo or a TV. Those devices send an electrical signal to the speakers: the higher the voltage the louder the sounds, and the faster the changes in voltage th...

Does a solar panel and a speaker work?

With a solar panel and a speaker you can hear AC light and the refresh rate of a television, even when our eyes only see constant light. Similarly, modulating the light with the frequency of sound makes the light flicker faster than our eyes can see --it flickers a bit with bass tones if at all-- but the solar panel and speaker will pick it up!

Why does my solar panel not make a sound?

This makes sense (lightbulb moment!) -- sound is changes in air pressure. If there are no changes in light intensity in front of the solar panel, then the voltage coming out of the solar panel will also stay the same. In that case the speaker will also not move air and no sound will be audible.

Why does my solar panel sound like a lightbulb?

If you hear the speaker popping and scratching, you are already hearing light and the changes in its brightness! If you are just holding the solar panel in front of the bright light, you won't hear anything. This makes sense (lightbulb moment!) -- sound is changes in air pressure.

Solar Sound System: Since i have been a scout for 12 years, a few years ago i decided to build a portable speaker powered by the sun. This project recieved a lot of great comments since it was ...
